

Swap and Shop:

I have a friend who is trying to liquidate his father's estate and has a lot of items that may be of interest to us as amateurs and electronics hobbyists. Rick's Dad was a registered Professional Engineer and over his career accumulated a lot of "tools-of-the-trade". Among other things he has the following:

- Signal generators
- Multimeters
- Tube testers
- Vacuum tubes
- Variacs
- Engineering Books and texts from all engineering disciplines.
- Vacuum tube manuals
- Components and hardware
- Computers including a Radio Shack TRS-80 was working.
- Capacitor & inductor testers
- HP XY Plotter

Rick is willing to entertain offers or donations some items will be free for the taking. He doesn't want these things to end up in a landfill and hopes to find homes for them with folks who will appreciate them. Anyone interested can contact me on my cell phone or email (330-774-1108, ajaybee92@gmail.com) and I'll arrange for a visit to Rick's QTH. Here are photos of some of the stuff he has to offer.
